

CENTRAL FOCUS AREA

PROPOSED FUTURE CROSS SECTION

N. 59TH ST. TO N. 72ND ST.

EXISTING CROSS SECTION*

* SIGNIFICANT CHANGES FROM THE EXISTING CROSS-SECTION ARE NOT ANTICIPATED IN THIS AREA. PLEASE SEE IMPROVEMENT RECOMMENDATIONS TO THE RIGHT.

DESCRIPTION OF PROPOSED FUTURE CROSS SECTION

Development Environment:

This section of the study corridor is adjacent to the Green Lake park and single family residences. Large scale redevelopment along this section of SR 99 is not anticipated.

Proposed changes to the existing cross-section in conjunction with private property redevelopment:

Since the environment along this section of SR 99 is not expected to redevelop in the next 30 years, a preferred cross-section to be constructed in conjunction with private redevelopment is not proposed for this section.

The only substantive change recommended for this corridor segment is adding a center raised median from North 59th to North 63rd Street.

If redevelopment does occur within the next 30 years, roadway cross-section improvements will be done in conjunction with private property redevelopment. The specific size and characteristics of the cross-section improvements will be determined based on the location and size of the redevelopment.
